## **New KOHLER PCV680LE engine**

*Kohler launches new Command PRO low-emission, EFI propane engine*

**Las Vegas, NV – March 2020** – As the demand for fuel-efficient, low-emission engines continues to grow, KOHLER is pleased to announce the launch of the Command PRO EFI propane engine (Model PCV680LE). An addition to the company's strong EFI lineup, the PCV680LE twin-cylinder, vertical-shaft engine significantly lowers exhaust emissions due to an integrated catalyst and optimized fueling.

“Low-emission technology is important for the environment, as well as users, and our goal is to ensure that alternative-fuel engines perform as well or better than gasoline- or diesel-fueled products,” said Quinn Derby, marketing manager for Kohler Engines. “We are continuously refining our products and developing new ones, as a way to continue to reduce emissions without sacrificing performance.”

An alternative to gasoline- and diesel-fueled engines, the PCV680LE 22-hp model is a cleaner-burning, more fuel-efficient alternative for commercial equipment. It saves significantly on fuel with less downtime for refueling. KOHLER EFI low-emission propane engines produce over 80 percent fewer exhaust emissions. KOHLER closed-loop EFI technology allows the PCV680LE to optimize performance by automatically adapting to operating conditions.

EFI engines also offer automotive-like turnkey starting and the elimination of carburetors and their associated maintenance. Like all Command PRO engines, the PCV680LE feature's KOHLER's three-year commercial warranty.

## About Kohler Engines

Kohler began manufacturing engines 100 years ago and has continually enhanced its product lineup in an effort to help make life easier and more profitable for end users around the globe. The company offers a full array of diesel, gasoline and gaseous-fueled engines – up to 140 hp. – which are supplied to equipment manufacturers worldwide in the construction, agricultural, industrial and lawn and garden markets.
