## New KOHLER Generators Bring Next-Level Performance to Commercial Applications

*Advanced controller and turbocharged engine among highlights of three recently-launched models*

**KOHLER, Wis. (July 30, 2018)** – KOHLER is introducing three new industrial light commercial generator models for stationary emergency applications. The KOHLER 25CCL, 30CCL, and 36CCL are 60Hz generators, which can be fueled by either natural gas or liquid propane and integrate the KOHLER APM402 controller as well as a KOHLER 2.2-liter turbocharged engine. The new generators provide advanced voltage and frequency regulation along with ultra-low levels of harmonic distortion for excellent power quality and enhanced protection for sensitive, valuable electronics.

“Providing between 25kW and 36kW of reliable backup power, these three models are the ideal size for a wide variety of commercial and light industrial settings,” said Amy Haese, associate product manager for KOHLER generators. “With our APM402 controller, these new units offer comprehensive system monitoring and diagnostics while the KOHLER turbocharged engine delivers proven reliability and performance in the field. We believe there’s a significant market for these new generators, which are loaded with beneficial features.”

The new KOHLER 25CCL, 30CCL, and 36CCL generators meet National Fire Protection Association (NFPA) 110, Level 1 requirements when equipped with the necessary accessories and installed per NFPA standards. All three models also utilize an aluminum sound-attenuating enclosure for quiet operation and come standard with a five-year or 2,000-hour limited warranty for additional peace-of-mind.
