## **INSTALLATION INSTRUCTIONS**

P21441

## **INSTALLATION INSTRUCTIONS**

#### THANK YOU FOR CHOOSING KALLISTA

## **INSTALLATION INSTRUCTIONS**

- Drill a 1-1/8" (29 mm) hole at the water supply line location.
- □ Install a 1/2" NPT nipple, with the end 1/2" (13 mm) to 5/8" (16 mm) from the finished wall.
- □ Apply thread sealant tape to the nipple.
- □ Thread the adapter onto the nipple.
- □ Turn the water supply on and check for leaks. Repair as needed.

- □ Measure 24" (610 mm) up from the adapter and mark.
- □ Confirm the mark is plumb with the center of the adapter.
- Desition the wall plate over the mark.
- Center the wall plate on the mark with the holes aligned horizontally.
- □ Mark the locations of the holes in the wall plate.
- □ Remove the wall plate.
- Drill 15/64" (6 mm) holes at the marks.
- □ Install the supplied wall anchors.
- □ Install the wall plate. Install an escutcheon on the wall plate. Secure with the setscrews. Do not overtighten.
- □ Slide an escutcheon onto the bottom of the shower arm.
- □ Slide the inlet of the shower arm into the adapter as far as possible.
- Move the shower arm to the vertical position and check for plumb.
- □ Secure the shower arm by tightening the three setscrews in the adapter. Do not overtighten.
- With the shower arm in the vertical position, measure the distance from the escutcheon to the inside edge of the shower arm.
- □ Cut the brace to the measurement.

## **INSTALLATION INSTRUCTIONS**

- □ Insert the brace into the escutcheon and position the bracket against the shower arm.
- Level the sleeve.
- □ Reassemble the bracket and tighten the nuts.
- □ Tighten the setscrew.
- □ Verify all connections are secure.
- □ Install an O-ring over the threads on the shower arm. Take care not to damage the O-ring on the threads.
- □ Thread the adapter onto the shower arm.
- Turn on the water supply.
- Check for leaks. Turn the water supply off. Repair as needed.
