LARGE GAS GENERATORS

TOTAL SYSTEM INTEGRATION
GENERATORS | TRANSFER SWITCHES | SWITCHGEAR | CONTROLS
KOHLER® large gas generators are custom-designed and targeted to fit your specific requirements. Many “one size fits all” models are built for continuous power, which limits their power rating for standby and prime applications. In contrast, every KOHLER generator is designed to work specifically for standby, prime or continuous applications – whatever you need. That means greater power efficiency and cost savings.

We chose Guascor® engines by Dresser-Rand® for our large gas generators. These rugged engines power thousands of fielded units worldwide. Each is specially tuned to the generator system for optimal power efficiency.

Plus, we’ve simplified the installation process – every model* is available EPA-certified to meet operational requirements on pipeline natural gas. There's no need to certify or recertify.

*Except the 1300REZCK model, which is available EPA-compliant.

STANDARD FEATURES

PROVEN ENGINE
Guascor engines are specially tuned to optimize system performance, accept a wide range of input fuels and are highly resistant to fuel contamination.

TESTED AND APPROVED
KOHLER generators meet tough industry testing and quality standards (UL, CSA, NFPA).

ULTIMATE PERFORMANCE
1800-rpm engines run quietly, offer extended life and provide cost-effective performance.

CLEAN RUNNING
KOHLER large gas generators run cleanly and need no after-treatment to meet strict EPA emissions standards.

LOWER EMISSIONS
Compared to diesel-fueled generators, KOHLER gas generators significantly reduce nitrogen oxide and particulate emissions.
KOHLER® NATURAL GAS/LP GENERATORS
TARGETED SOLUTIONS FOR ANY APPLICATION.

We don’t do “one size fits all.” Instead, KOHLER generators are purpose-built for your continuous, prime or standby needs – which means greater power efficiency and cost savings. Rugged Guascor® engines by Dresser-Rand® are specially tuned to the generator system for optimal power efficiency.

Our low-speed, 1800-rpm generators require less maintenance and provide quiet operation with long-lasting durability. Every model through 1 megawatt is EPA-certified (the 1.3-megawatt model is EPA-compliant) to meet operational requirements. This simplifies the installation process – and there’s no need to certify or recertify.

Kohler Power Systems has delivered energy solutions worldwide since 1920 – from hospitals and water treatment facilities to the gas, oil and energy industries. Before they see the light of day, our generators endure tough testing standards: sound, power, cooling and system performance. To make sure they hold up in harsh conditions, we coat the generator enclosures, skids and components with our corrosion-resistant, heavy-duty Power Armor™ Paint System.
CONTINUOUS-POWER MODELS: BUILT FOR EFFICIENCY

- Available EPA-certified (model 1300REZCK is EPA-compliant-capable) and ECM-controlled and meet the latest spark-ignited emission requirements for emergency operation.
- Offer high electrical efficiencies.
- Built to run at up to a 100% load factor over the life of the generator.
- Factory cooling options allow for up to 40°C ambient operation.

PRIME-POWER MODELS: BUILT FOR LOAD ACCEPTANCE

- Available EPA-certified and ECM-controlled and meet the latest spark-ignited emission requirements for non-emergency operation.
- Built to run at up to a 90% load factor over the life of the generator; meet ISO-8528 G1 power quality standards even through a 53% load step.
- Capable of accepting rated load in one step.
- Factory cooling options allow for up to 50°C ambient operation.

EMERGENCY STANDBY MODELS: BUILT TO LAST

- Available EPA-certified and ECM-controlled and meet the latest spark-ignited emission requirements for emergency operation.
- Built to run at up to an 85% load factor over the life of the generator; meet ISO-8528 G1 power quality standards even through a 53% load step.
- Capable of accepting rated load in one step.
- Factory cooling options allow for up to 50°C ambient operation.

Ratings based on 3-phase, 480 V. Continuous rating at power factor of 1.0
For additional technical specifications, visit KohlerPower.com
The Decision-Maker 8000 provides advanced controls, system monitoring and system diagnostics with remote monitoring capabilities for paralleling multiple generator sets – all in a large, user-friendly display with intuitive local data access.

KOHLER DECISION-MAKER 8000 DIGITAL CONTROLLER

- Standard remote web monitoring
- Multilevel password protection
- Communication with serial (RS-485) and Ethernet (RJ-45) to support Modbus and SNMP
- Data logging and trending for easy troubleshooting
- USB flash drive for data storage and event history exports
- Advanced input and output configuration
- Paralleling of up to 32 generators
