Introduction

This manual lists service replacement parts for KDI 3404 TCR and 3404 TM engines.

Information in this publication represents data available at the time of print. The generator set manufacturer reserves the right to change this publication and the products represented without notice and without any obligation or liability whatsoever.

This manual includes the following main sections:

Introduction (and other information sections). Contains introductory material about part numbers and illustrations.

Engine Parts Table. Lists the engine model and installed option numbers.

Parts Lists. List the replacement part numbers of parts in the option number.

Numbering System Significance

This manual uses the following numbering systems:

Specification Number. The product identification number located on the engine nameplate. Specification numbers break down into option numbers.

Option Number. A unique number representing a parts group needed to assemble an engine function.

Part Number (Code). The part number (code) identifies an individual assembly, subassembly, or component.

Illustrations

Illustrations (or exploded-view drawings) best representing the widest range of variations accompany most groups in this manual. Illustrations do not depict all details and may not show all parts. Do not use illustrations for assembly or disassembly.

How to Find Part Numbers

Use the following steps to locate a service replacement part.

1. Locate the engine nameplate to **identify the engine specification number**.
2. **Turn to the Engine Parts Table** for the specification number identified in step 1.
3. **Identify the code number** most likely to include the service part number.
4. **Page forward to locate the code number** identified in step 3 or find the appropriate page in the Engine Parts Table.
5. **Find the part on the illustration** and note the item number of the part or **find the part description in the parts list**. The replacement part number is located in the Code column.
