

SERVICE KIT INSTRUCTIONS

Jet Replacement

When servicing/replacing a plastic effervescent jet Kohler recommends that all effervescent jets in the whirlpool be replaced with this kit.

- Remove and replace the jets **one at a time**. Use the provided jet tool to turn the jet counterclockwise for removal.
- Apply a bead of silicone sealant around the threads and under the flange of the jet.
- Install the jet finger tight, then tighten an additional 1-1/2 turns clockwise.
- Wipe away excess sealant.
- Install the color-matched cap included in the kit.
- Allow the sealant to cure for 30 minutes before filling the bath and testing for leaks.
